

## HEALTH & SAFETY

We consider Health and Safety to be of the utmost importance. It is one of the reasons why we employ our installation teams on a full time basis.

Retaining our own floorlayers means that they participate in our Health and Safety programme and are kept up to date with additions and changes to our product range. We are also in a position to ensure that our employees are equipped with all necessary PPE.

Having informed and safety conscious floorlayers means that we are able to act in the best interest of our clients.

### Safety Scheme Participation

To meet the safety requirements of our diverse customer base, we have participated in two nationally recognised safety schemes. All of our installation staff carry CCNSG Passports and / or have passed the basic Health and Safety test for a CSCS card. In most cases our staff are qualified for both schemes.

### Additional Qualifications

#### FIRST AID

'In addition to ensuring that our employees have passed the Health and Safety tests required for the CCNSG Passport, we endeavour to have at least one qualified First Aider on every installation team. This enables us to be self sufficient when working during shutdowns'.

The qualified team members would have successfully completed an approved four day First Aid at work course.

#### FORKLIFT USE ON SITE

Many of our floor layers hold licenses to drive counterbalance fork lift trucks.

#### RISK ASSESSMENTS

Method Statements, Risk Assessments and Coshh Assessments are provided as common practice.

Trowel application ensures an even distribution and consistent finish

Our top quality screeds can transform a dilapidated surface to an operational floor

Our full time team of floor layers, offer flexibility to our clients

Professionally installed floor markings give clear health and safety information

## About us

### Established

Elgood Industrial Flooring Ltd is a family company with an enviable track record in the UK. We have specialised in industrial flooring since 1898 and since the 1970's have been designing, manufacturing and installing resin floor systems for industry and broadcasting.

### Relevant

Experience has shown the prominent role that a floor plays in the function and presentation of a facility.

For this reason many clients are now opting to exclude industrial floor finishes from their 'design and builds' in order to reserve their right to select freely and independently.

We are able to offer an informed approach supported by full Project Management. This strength enables us to work alongside customers 100% of the time from the initial enquiry through to the point of completion.

### Forward Thinking

All of our products in the Supply and Install or Supply Direct range are either Solvent Free or Water-based with very low VOC making our products both environmentally and user friendly.

### Customer Assurance

When you require a floor installation you need to employ a company that can satisfy your own high standards of business management.

The fact that we have been trading for over 100 years is testament to our commitment to customer satisfaction. This has ensured our continued success as one of the UK's leading industrial flooring companies.

As a single source manufacturer and installer we have complete control over both the product quality and the installation workmanship. Longstanding clients include Arjo, Aylesford Newsprint, BBC, BAE Systems, Cummins Diesel, Granada Television, Hepworth, Honeywell, ICI, Lec, Marconi, Pindar, Pioneer, Procter and Gamble, Rolls Royce Motor Cars, Sumitomo, Wincanton, Vaillant and many other leading companies in the UK.

### Working with Customers

By continually developing our products and installation techniques, we provide clients with a range of proven high performance floors designed to meet their needs. Please see our ever increasing catalogue of completed projects and case studies at [www.elgood.co.uk](http://www.elgood.co.uk)

### Elgood Guarantee

Being a single source supplier and installer we are able to provide a reassuring materials and workmanship guarantee. Guarantee periods run from 2 to 10 years, depending on the flooring system installed. There is no divided responsibility.

### Successful Floors

There are two key elements to a successful industrial floor installation. Firstly, the choice of the appropriate flooring system to meet the performance, appearance and budget criteria. Secondly, the quality of both the materials used and the installation workmanship.

A Supervisor will be on site to liaise with you and ensure that your requirements are met.

You are in complete control of the installation of your new floor!

**'As a single source manufacturer and installer we have complete control over both the product quality and the installation workmanship.'**

## About the way we work

### Project Management

Continually manufacturing and installing large areas of industrial flooring, Elgood has accrued a wealth of project management experience. Each installation is carefully planned with the client and the work is then completed on time to the agreed programme.

### Installation Technique

Regardless of whether we are installing coatings, flow coats or screeds, the majority of our floors are laid with a trowel application. This ensures an even distribution of the resin and a highly consistent overall finish.

Installations are carried out by our full time employed floor layers so there is no divided responsibility which enables us to provide a materials and workmanship guarantee.

### End Of Term & Renovation Services

We offer a single source management service specifically designed to meet these requirements. Primarily, we specialise in the refurbishment of a floor which can involve working with or removing an existing floor covering. Case studies can be found on [www.elgood.com](http://www.elgood.com)

### Transferable Guarantee

As Elgood Industrial Flooring manufacture and install the Brittdura range of flooring we are able to provide a materials and workmanship guarantee with every installation. Perhaps most importantly, this guarantee is transferable to the incoming tenant.

You have the assurance of dealing directly with the manufacturer throughout the programme which means that we can submit an all inclusive package with no risk of hidden charges or divided responsibility.

### After Care

Inevitably, through general wear and tear, a floor will become marked, scratched, scuffed and damaged. As part of our comprehensive industrial flooring range, we can provide a cleaning and renovation service for all of our floors to restore a high standard of appearance.

Situations when this need might arise are typically ; important site visits, audits, open days or even just to compliment your own routine cleaning.

### Environmentally Friendly

The range of products which we offer is free from solvent and VOCs. We also operate a recycling programme for our packaging.

### Services Available

- Jointing repairs
- Patch repairs
- Degreasing, lightly abrading and the application of a new top coat
- Degreasing, lightly abrading, carrying out repairs and applying a new top coat
- The reinstatement and / or upgrade of a slip resistant finish
- The installation of floor signs and safety markings in permanent Epoxy paint
- Change of layout or colour

You can be confident that all of the above will be completed with the same assurance of quality.
